

VIGILENT CommandSight™

Applications

- Critical incident management
- Multi-jurisdiction coordination
- Day-to-day public safety and public health management
- Disaster preparedness and response
- Voice, data and video interoperability communications capability

Compressus Solutions, Inc. is a software development company offering robust, proven solutions in the growing fields of disaster preparedness, interoperable emergency communications and biosurveillance.

Advanced Command-and-Control for Incident Management

Major disasters such as Hurricane Katrina and 9/11 have revealed how difficult it is to collect and distribute critical-incident information across jurisdictional lines. The same challenge arises in many communities almost every day, whether the challenge is a hazardous materials accident, a missing child, or a planned event requiring coverage by multiple public safety agencies.

Compressus Solutions Inc. technology provides a solution. CommandSight is a Web-based critical-incident management solution that provides authorities with enhanced capabilities to monitor and manage all aspects of day-to-day operations and major emergency events. CommandSight provides real-time tracking, analysis and display of incident data from multiple sources, enabling superior situational awareness, better collaboration, and faster, more accurate decision making.

Robust Notification and Smart Routing Capabilities

Each VIGILENT Systems module, including CommandSight, incorporates robust, rulesbased notification and smart routing capabilities, enabling instant communications to all types of communications devices: telephones, radios, pagers, PDAs and fixed or mobile computers.

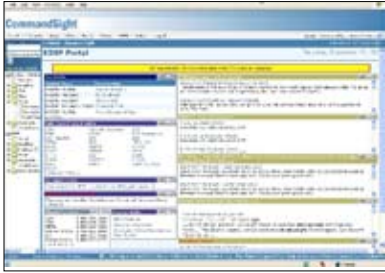

Meets or Exceeds Government Requirements

VIGILENT Systems comply with, interface with and enhance the functionality of the U.S. Government's Health Alert Network (HAN), the National Electronic Disease Surveillance System (NEDSS) and the National Incident Management System (NIMS). It is NIEM Compliant and it also meets or exceeds several of the Critical Capacity Requirements established for the states by the U.S. Centers for Disease Control and Prevention (CDC).

VIGILENT Systems™

CommandSight is one of the interoperable modules of the VIGILENT Systems' suite of software solutions, providing superior situational awareness and multi-agency information sharing for public safety, homeland security and public health protection. VIGILENT Systems deliver enhanced capabilities to manage day-to-day challenges as well as major emergencies and preparedness efforts.

Superior Situational Awareness

Protocol-Driven Checklists

Recording and Reporting

Features	Benefits
Real-time tracking, analysis and display of multiple variables and data from real-time sources	<ul style="list-style-type: none"> • Superior situational awareness and collaboration across jurisdictions • Faster, more accurate decision making • Constant visibility into the status of critical incident resources
Interoperable, standards-based design	<ul style="list-style-type: none"> • Leverages existing investments in hardware and software, while adding new capabilities and interoperability • Compliance with NIMS
Robust, rules-based smart routing and alerting capabilities	<ul style="list-style-type: none"> • Distributes the right data and messages to the right people at the right time, via multiple networks and devices • Improves collaboration
Geographic maps and displays with zoom-in and -out	<ul style="list-style-type: none"> • Provides a visual representation of resource status at various levels of granularity • Allows commanders to visually define areas of interest such as perimeters, hot zones, and staging areas • Provides a Web-based, intuitive userinterface that speeds deployment and training
Detailed checklists and event recording	<ul style="list-style-type: none"> • Assists protocol-driven response activities, compliance with NIMS • Provides audit trail with playback capability • Training and simulation tool
Redundant, secure data storage	<ul style="list-style-type: none"> • Non-repudiation of data • System resiliency in crisis situations • Access limited to authorized users
